Ayrshare Business Integration Guide

Domain: **id-9ILZ5**

Welcome to Ayrshare!

The following are key pieces of information you'll need to single sign on your users to Ayrshare. We recommend reviewing the docs below to get started.

Important Docs

- RESTful Endpoints
- Testing the API with Postman
- User Integration
- API Integration with For Multiple Users
- Manage Multiple Accounts

> Note: If you are using a no-code platform, we offer several integration guides such as Make and Bubble: Integration Guides.

Private Key

A public/private 1024-bit key is used for creating and authenticating the JWT (JSON Web Token). Included in this package is your private.key file.

Generate JWT

Generating the JWT requires your API Key, user's Profile Key, the Private Key private.key file found in this package. Also included in this package is a Postman JSON file that includes your API Key and and Private Key - just add your user's Profile Key to the Postman file. Please see guides above for how to obtain by generating it using the `/generateJWT` endpoint and how to use Postman to test the API.

SSO URL and Domain

After generating the JWT, call the following URL in a new window/tab to SSO your user into the Ayrshare Social Linkage page. Your domain is **id-9lLZ5**. This is also the DOMAIN used with the `/generateJWT` endpoint.

`https://profile.ayrshare.com/social-accounts?domain=id-9lLZ5&jwt=TOKEN`

Where *TOKEN* is the JWT you generated. If successful, you will be SSOed into Ayrshare and see your logo in the top left corner. Note, the JWT token is only valid for 5 minutes, but can be increased with the Max Pack.

To test, we recommend logging out of all Ayrshare sessions and manually calling the above URL with your token to verify the JWT was properly generated.

Note 1: the `/generateJWT` endpoint will also return the above URL.

> If you are *testing different users in the same browser*, you might want to force logout. Otherwise the current users will stay logged in.

Branded Logo

Upload your own logo to display on the social linking page. Go to the Ayrshare dashboard, click "User Profiles", switch to the Primary Profile, and click "Settings" to upload your logo.

The ideal size is 1050x310 where the width is greater than the height.

Testing the API

We recommend Postman to become familiar with the API and test the calls. Please be sure to add your API Key as a variable or directly put in the Header.

https://www.ayrshare.com/docs/testing/postman

Test with a random quote, use the *randomPost* parameter:

see here

You can also try Hurl, a command line app to test HTTP API calls. Please see our guide on using Hurl.

Add Privacy Policy

Please add a link to our privacy policy in your privacy policy page. We suggest the following text be added to your privacy policy:

"Social media capabilities provided by Ayrshare."

The direct link to our policy: https://www.ayrshare.com/?ref=privacy

Invite Team Members

You can invite team members to access the dashboard with full admin rights. Please note:

- Our support team is here to help your developers. Please first register them as team member under your account so we can verify their identity.
- A new team member counts as a user profile.
- The team member email must not exist in our system. If it already exists, just let us know and we can remove it before you send the invite.

Updates and Status

Follow us on Twitter to get update, API status, and other important information:

@Ayrshare

Additional Guides

- Testing SSO
- Post Verification
- Image and Video Guidelines
- SDK Packages

Questions

If you have any questions or difficulties, please let us know and we can help you through the integration process.
