

DASHBOARD

How To Use:

Describe what you want in plain language — a UGC ad, product shots, or a multi-video campaign. Tap a suggestion chip below the composer for a proven starting prompt, or write your own brief. Each submission creates a project and hands off to the Creative Agent for scripting, casting, and generation.

TAGGING

How To Use:

Type @ in any prompt to search and tag influencers, products, images, or videos from your library. Tagged assets anchor the agent to real references — so output stays on-brand, on-product, and consistent across a campaign.

PROJECTS

How It Works:

Every Dashboard prompt opens a project — a persistent workspace for the agent thread, images, and videos. Return anytime from Projects to re-prompt, refine assets, or continue a campaign without losing context.

INFLUENCERS

How To Use:

Choose from ready-made AI Influencers, or click + New Influencer to upload a custom persona. For founder-led content, open My AI Clones to set up your face and voice — then @mention them in any brief.

PRODUCTS

How To Use:

Add physical or digital products here — upload images, run AI Vision analysis, or link app clips. Once saved, @mention any product in a prompt to generate UGC, cinematic shots, or full campaigns around it.

PUBLISH

How It Works:

Connect Instagram, TikTok, or YouTube via Manage Connections, then schedule finished videos from the Calendar or directly from any asset. Aitoma Studio publishes to your profiles — creation to distribution in one platform.

ANALYTICS

How It Works:

Open the Analytics tab to track performance across connected accounts — views, engagement, and post-level metrics. Run AI hook breakdowns on top performers, add competitor handles to benchmark trends, and reuse winning patterns in your next brief.

EDITOR

How To Use:

Generated videos sync to the Editor automatically. Trim clips, adjust captions, add music, or use the AI editor chat to refine by instruction — full post-production without leaving Aitoma Studio.

CAMPAIGNS

How It Works:

Ask the agent for scale — e.g. "Build a 5-video UGC campaign" or a multi-day content plan. The Creative Agent orchestrates batch scripting, generation, and scheduling so you move from one-off clips to full campaign production in a single workflow.

FEEDBACK

How To Use:

See something unexpected? Click the feedback bubble (bottom-right) to send notes, bugs, or ideas. During this MVP demo, your input goes directly to the team building what ships next.

NOTE

Please Note:

Aitoma Studio is in active MVP — you may hit rough edges or in-progress features. That's expected. Explore the full flow freely; we're optimizing daily ahead of public launch.

Thank You
