Aitoma Studio -- Complete UX/UI Style Guide

https://aitoma-ugc.lovable.app

---

1. Typography

- Font Family: Inter (Google Fonts), with fallbacks Arial, sans-serif
- Font rendering: font-feature-settings: "cv02", "cv03", "cv04", "cv11" + antialiased + font-display: swap
- Type Scale:

display	72px	1	-2.5px	700
h1	56px	1.1	-1.5px	700
h1-mobile	40px	1.1	-1px	700
h2	40px	1.2	-0.5px	600
h3	28px	1.3	--	600
h4	20px	1.4	--	600
body-lg	18px	1.7	--	400
body	16px	1.6	--	400
body-sm	14px	1.5	--	400
caption	12px	1.4	0.5px	500

- Hero headline uses clamp(32px, 6vw, 72px) for fluid scaling
- Headings use tight negative tracking (-2px to -0.5px)
- Body text uses generous line heights (1.5--1.8) for readability

---

2. Color Palette

CSS Variables (HSL format, no hsl() wrapper in variables):

--background	220 60% 98%	#F0F4FF	Page background	
--foreground	240 11% 11%	#1A1A1F	Primary text	
--primary	217 100% 60%	#337AFF	Brand blue, buttons, links, icons	
--primary-hover	217 78% 47%	--	Button hover state	
--primary-light	217 100% 95%	--	Light blue tint	
--secondary	220 19% 18%	--	Dark buttons	
--accent	252 93% 85%	#C7BBFD	Purple accent	
--accent-warm	40 100% 50%	--	Warm orange accent	
--muted	220 14% 96%	--	Muted backgrounds	
--card	0 0% 100%	#FFFFFF	Card backgrounds	
--border	220 14% 92%	--	Default borders	
--border-strong	216 12% 84%	--	Stronger borders	
--success	160 84% 39%	#10B981	Check marks, success states	
--warning	38 92% 50%	#FFA800	Stars, warnings	
--destructive	0 84% 60%	--	Error states	

Semantic text colors:

- text-primary: hsl(240, 11%, 11%) -- main text
- text-secondary: hsl(240, 4%, 39%) -- descriptions, body text
- text-muted: hsl(217, 16%, 65%) -- captions, less important text
- Dark sections use white with opacity: text-white, text-white/70, text-white/85

---

3. Gradients

gradient-text	linear-gradient(135deg, hsl(210,97%,57%), hsl(260,90%,80%	Hero headline gradient word, always blue-to-		

	hsl(260,90%,80%), hsl(252,93%,85%))	purple		
gradient-cta	linear-gradient(135deg, hsl(217,100%,60%), hsl(249,72%,63%))	Primary CTA buttons		
gradient-hero-bg	linear-gradient(135deg, hsl(220,100%,98%) 0%, hsl(220,100%,96%) 50%, hsl(252,100%,97%) 100%)	Hero background		
gradient-dark	linear-gradient(135deg, hsl(225,50%,5%) 0%, hsl(222,40%,11%) 40%, hsl(265,40%,16%) 100%)	Problem section dark background		
gradient-final-cta	linear-gradient(135deg, hsl(222,72%,45%) 0%, hsl(217,100%,60%) 40%, hsl(249,72%,63%) 100%)	Final CTA banner		
gradient-product-type	linear-gradient(135deg, hsl(220,100%,98%) 0%, hsl(252,100%,97%) 100%)	Product type section bg		
Badge gradient	linear-gradient(90deg, #337AFF, #6B5FE4)	"Most Popular", "New", metric badges		

All gradients use the 135-degree angle consistently (blue-to-purple direction).

4. Glassmorphism System

The core visual identity. Two variants:

.glass (light):

```
background: rgba(255, 255, 255, 0.60);
backdrop-filter: blur(14px) saturate(180%);
border: 1px solid rgba(255, 255, 255, 0.80);
box-shadow: 0 8px 32px rgba(31, 38, 135, 0.08), inset 0 1px 0 rgba(255, 255, 255, 0.9);
```

.glass-dark (dark sections):

```
background: rgba(15, 20, 40, 0.45);
backdrop-filter: blur(14px) saturate(160%);
border: 1px solid rgba(255, 255, 255, 0.08);
box-shadow: 0 8px 32px rgba(0, 0, 0, 0.30), inset 0 1px 0 rgba(255, 255, 255, 0.06);
```

Glass shimmer on hover: A subtle light sweep animation (shimmer keyframe, 0.8s) runs on .glass:hover.

Fallback: For browsers without backdrop-filter, backgrounds fall back to near-opaque.

---

5. Background System

BackgroundMesh -- fixed, full-viewport, -z-10:

- Base: solid #F0F4FF (light blue-white)
- 3 radial gradients layered on top:
  - Blue orb at 20% 30%: rgba(51,122,255,0.12)
  - Purple orb at 80% 70%: rgba(199,187,253,0.15)
  - Cyan orb at 50% 10%: rgba(51,200,255,0.08)
- Topped with a frosted overlay: rgba(255,255,255,0.4) + blur(40px)

CursorGlow: A 300px radial gradient circle (rgba(51,122,255,0.06)) follows the mouse cursor, z-50, 60% opacity.

---

6. Border Radii

card	16px	Standard cards		
button	12px	CTA buttons		
pill	9999px	Badges, toggles, pills		
lg	0.75rem (12px)	UI components		
Glass cards	20--28px	Feature cards, pricing cards, FAQ items		

---

7. Shadows

shadow-card	0 4px 12px rgba(0,0,0,0.08)	Default card shadow		
shadow-card-hover	0 8px 24px rgba(51,122,255, 0.10)	Card hover -- blue tinted		
shadow-glow	0 4px 16px rgba(51,122,255, 0.35)	CTA button glow		
shadow-glow-hover	0 6px 24px rgba(51,122,255, 0.45)	CTA button hover glow		
shadow-hero-mockup	0 24px 64px rgba(51,122,255, 0.20), 0 8px 24px rgba(0,0,0,0.10)	Hero visual		

Key pattern: Hover shadows use the primary blue (rgba(51,122,255,...)) to create a branded glow effect.

8. Buttons (CTAButton Component)

Variants:

primary	gradient-cta + white text + shadow-glow + hover lift (-1px)			
secondary	Solid dark bg bg-secondary + white text			
outline	Transparent + border-primary + blue text + hover bg-primary-light			
ghost	Transparent + muted text + hover bg-muted			
hero-invert	White bg + blue text (used on colored backgrounds)			

Sizes: sm (px-5 py-2.5 13px), md (px-7 py-3.5 15px), lg (px-9 py-[18px] 16px)

.btn-glow class: Adds the gradient background + blue glow shadow + hover lift (-2px) + increased shadow. Uses cubic-bezier(0.16, 1, 0.3, 1) easing.

9. Iconography

- Custom two-tone SVG icons (no emoji anywhere)
- strokeWidth: 1.75, strokeLinecap: round, strokeLinejoin: round
- Two-tone effect: stroke outlines + fill with fillOpacity: 0.12--0.15 for accent shapes

- Icon containers: 14px border-radius squares with subtle gradient backgrounds: linear-gradient(135deg, rgba(51,122,255,0.12), rgba(107,95,228,0.12))
- Standard icon size in feature cards: 28px inside a 56px (w-14 h-14) container
- Lucide React is used for generic UI icons (Menu, X, ChevronDown)

---

10. Layout & Container

- Max width: 1280px, centered
- Container padding: 1.5rem (24px) on all sides
- Section padding: py-16 sm:py-24 (64px mobile, 96px desktop)
- Grid patterns:
  - Hero: 2-column on lg, stacked on mobile
  - Features: 3-column on lg, 2-column on sm, 1 on mobile
  - Pricing/Testimonials: 3-column on md
  - How It Works: 4-column on lg, 2-column on sm
  - FAQ: Single column, max-w-3xl centered
- Card gaps: Consistently gap-5 or gap-6

---

11. Animations

animate-reveal	opacity: 0 -> 1, translateY(24px -> 0), 0.6s, cubic-bezier(0.16, 1, 0.3, 1)	Section entry animations		
animate-float	translateY(0 -> -12px -> 0), 3s infinite	Floating elements		
animate-pulse-dot	scale(1 -> 1.4), opacity(1 -> 0.5), 2s infinite	Status indicator dots		
animate-drift-1/2/3	Slow xy translation, 12--20s infinite	Background orbs in CTA		
Scroll reveal	useScrollReveal hook with IntersectionObserver at threshold 0.12	All content sections		
Staggered entry	transitionDelay: ${i * 70}ms per card index	Card grids		

Easing: Spring-like cubic-bezier(0.16, 1, 0.3, 1) for reveals; standard ease-out for UI transitions.

---

12. Section Breakdown (Top to Bottom)

1. Announcement Bar -- Dark gradient strip, dismissible, 13px white text
2. Header -- Sticky, white/85% bg with backdrop-blur-xl, 68px height, border-bottom
3. Hero -- Two-column (text + video carousel), glass pill badge, gradient headline, dual CTAs
4. Social Proof Strip -- Horizontal scroll of glass pills with platform icons + metrics
5. Problem Section -- gradient-dark background, glass-dark pain-point cards, 2-column grid
6. How It Works -- 4-step glass cards with watermark numbers, dashed connector line on desktop
7. Features -- 3x3 grid of glass cards with two-tone icons, hover lift + blue glow

8. Product Type -- Glass container with tab switcher (Digital / Physical), 2-column content
9. Video Examples -- Video carousel showcase
10. Testimonials -- 3-column glass cards with star ratings, quote icons, metric badges
11. Pricing -- 3-tier glass cards, glass toggle (Monthly/Yearly), highlighted "Pro" tier with blue border glow
12. FAQ -- Accordion with glass items, blue left border on open, chevron rotation
13. Final CTA -- gradient-final-cta background with floating orbs, inverted white CTA button
14. Footer -- Dark (#070A12) background, 4-column grid, glass-dark social icons

---

13. Component Patterns

- SectionHeader: Centered, optional PillBadge eyebrow (outline variant, uppercase, 11px), h2 headline, optional gradient word, subtitle in text-text-secondary
- PillBadge: rounded-pill, 11px uppercase bold, 4 variants (primary, accent, warm, outline)
- FeatureCard: bg-card border border-border rounded-card p-7 shadow-card, hover: border-primary shadow-card-hover -translate-y-0.5
- Glass cards: glass rounded-[20-28px] p-6 sm:p-9 with hover effects via inline JS (boxShadow, borderColor)
- Focus states: focus-ring utility = focus-visible:ring-2 ring-primary ring-offset-2

---

14. Responsive Strategy

- Mobile-first with sm: (640px), md: (768px), lg: (1024px) breakpoints
- Hero switches from stacked flex-col to lg:grid-cols-2
- Buttons go w-full sm:w-auto on mobile
- Font sizes reduce on mobile (e.g., h2 from 40px to 28px)
- Navigation collapses to a slide-in drawer on mobile (md:hidden)
- Cards stack to single column below sm

---

15. Key Design Principles to Follow in the SaaS App

1. Glass everywhere: Use .glass for cards, panels, modals, dropdowns, sidebars
2. Blue-purple gradient accent: All primary actions, highlights, and badges use the blue-to-purple gradient

3. No emoji: Always use custom two-tone SVG icons with strokeWidth: 1.75 and 15% opacity fills
4. Generous spacing: Sections at 96px vertical padding, cards at 24-36px internal padding
5. Subtle animations: 0.6s reveal on scroll, 70ms stagger between siblings, spring easing
6. Blue glow on interaction: Hover states add blue-tinted shadows, not generic gray
7. High contrast text hierarchy: Near-black headings (#1A1A1F), medium-gray body (#4A5568), light-gray captions (#94A3B8)
8. Rounded corners everywhere: 16-28px for cards, 12px for buttons, pill (9999px) for badges
